1. Newman, Keriema <Newman.Keriema@epa.gov>; gkowalski@otie.com <gkowalski@otie.com>;
Wendel, Jennifer <Wendel.Jennifer@epa.gov>;

Keriema, The samples were split and sent to the lab after screening.
Fixed structures means houses, sheds, buildings, concrete pads, driveways, and things of that nature.
Let me know if you need anything else.

Russell

ATSDR is asking for clarification. Can you provide insight?

Okay, I knew as soon as I hit "send" I would remember what the other comment was..... another reviewer asked about this description: "All soil samples were field screened for RCRA 8 metals using X-ray fluorescence spectrometer (XRF) and about 10% were submitted to the laboratory for RCRA 8 metals analysis."

The reviewer questions whether the samples were "split" and sent to the lab, so the sentence would read "All soil samples were field screened for RCRA 8 metals using X-ray fluorescence spectrometer (XRF) and about 10% were **split and** submitted to the laboratory for RCRA 8 metals analysis."

If you know, please share so I can update the HC accordingly.

Thanks, Danielle

Jennifer,

As I incorporate the updated reference, I had a reviewer ask me to provide example(s) what is meant by stationary fixed structures. The statement is in reference to the point that samples were not collected for "soil under stationary fixed structures" (see page 13 in the pdf).

Thanks a bunch, Danielle

Hi Danielle. I have attached the report.

This is the summary report, plus Appendices A and B.

Appendix C is the photo log, D is the field log books and E is the laboratory analytical data sheets. These last three Appendices are several thousand pages....let me know if you need those as well, they will need to be burned to a DVD.

Jennifer,

The sampling data (actual results) should be cited USEPA 2015b, which is for our download from the Scribe database. But the you are right that I use the OTIE 2012 reference to describe some of the site's background information as well as the sampling procedure (how the samples were obtained/analyzed). I don't think I have the Dec 2013 letter report you mentioned below, so if you could share that, it would be much appreciated. I can update the ATSDR document accordingly.

If you see any other discrepancies, please let me know!

Thanks, Danielle

Hi Danielle and Keriema. In reviewing the document I did notice one thing that kind of stood-out to me. The document continually references the 2012 OTIE QAPP as the source of the sampling data [results]. However, the actually results are included in a December 31, 2013 letter report from OTIE to EPA.

Of particular importance is a description of how and where the samples were obtained. I did notice that there were some field changes made, and want to make sure that ATSDR is referencing the final report! (I think I am reading this right)

Would you like us to send a copy of this letter report or do you have it?

Thanks!
